

Longhurst Golf Range

The refurbishment of Longhurst Golf club included the driving range where consideration had to be made for the impact on the chosen covering in such a heavily used space where spiked shoes and the potential for light side weathering are part of the course. One of the few options on the market for the confident durability against spiked shoes is to use **SPIKEMASTER**.

Rawson Carpet Solutions developed spikemaster for the sole purpose of resisting footfall from spiked shoes and protecting the subfloor below. It is a tried and tested product that has been used for many years specific to this type of project. The range comes with a choice of colourways to complement the space.
