

W.E. RAWSON

YOUR SUCCESS IS OUR SUCCESS

Who we are

A long established non-woven textile company with a tradition of continuous improvement in manufacturing and innovation

What are our aims?

We aspire to be the market leaders through reputation and being our customers partner of choice

How will we get there?

Producing Safe, high quality innovative Products

Providing great customer service

Implementing High standards of Safety and involving our people

Meet the needs of our stakeholders

Caring for the Environment

Here at WE Rawson, our market intelligence often identifies new requirements.

Our technical innovation utilises this to create high quality solutions and manufacturing processes.

We develop new products, when satisfied, we field test them and review.

All of our products started as trials.

Innovation and ongoing product quality is our lifeblood.

We aim to ensure our customers always get the product and service they require, at the time agreed, ensuring excellent communication from order conception to completion.

This is backed up with industry leading technical support provided to assist our customers

Our goal is to ensure all our people have the resource and training required to guarantee quality workmanship in a safe working environment.

We foster a culture of safety, quality and continuous improvement driven manufacturing.

We look to build upon our tradition of innovation, quality, safety and value in our chosen markets, to provide products, management performance and financial results that meet the interests of our stakeholders and legal/ other requirements.

We see caring for the environment as an opportunity rather than a cost:

- We minimise the impact of our activities and greenhouse gasses through waste reduction, energy efficiency and the use and output of recyclable materials within our manufacturing operations.
- We ensure that steps are undertaken to prevent pollution
- We ensure our finished products are designed with long life, minimised impact and engagement with the circular economy
